## File versions

*During edition, your platform allows you to create file versions and rollback on previous ones.*

### **How to reach versions**

Right-click on file or click on  then in the menu, click on "Details" (lower option in menu). A column pops up on the right of the screen, in the upper part you will see the latest version of your file, then the previous ones.

Type a comment here, strike 'Enter' to save it or 'Escape' to cancel

For every version you can see a bunch of icons :

VERSION 2

1

2

2

- : number of share links
- : number of sights
- : number of downloads

-  : brings to the next menu

As you can see, you can also get a preview or download the file.

You can eventually delete this file or any version you want to.

## Exemple

*This is a file "Document de test.docx" you want to rollback to a version older than version 8 :*

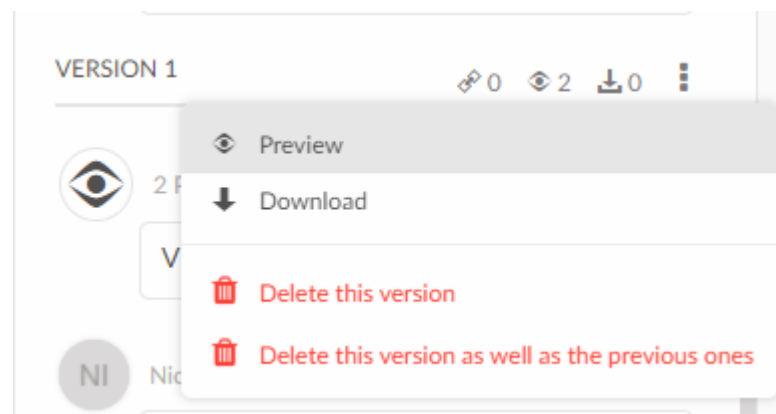

- Right-click/Details on your file.
- On version 8 line, click on  and  **Preview** (overview), then check the preview if this is the right version you're looking for
- On version 10 line, click on  and  **Delete this version** (Delete version)
- On version 9 line, click on  and  **Delete this version** (Delete version)
- You're done !

## Restore an older version as the main version

You need to restore an older version as the newest ?

### **2 methods for that :**

1. Download the file and add it again
2. Open preview, then modify it (a simple "space" or "comma" will do the trick), which generate automatically a new record.

Then  **Edit**  anything to trigger a new record, and you're done !
