

Antivirus scan

Guilhem VERGON - 2025-09-03 - [Mangae your platform](#)

For better data protection, an analysis is setup by default on your platform.

A security check is made as soon as you add a file under 10Mo and for any tool (Synchronization, Network drive or web browser)

If something wrong is detected, administrator will be sent an email with a warning that file or folder has not been added and user account will be deactivated.

Find this feature

- Login with an administrator account on your **NetExplorer platform**, then go to Configuration/Security & Compliance
- Get to the bottom of page to "Other" section

The screenshot shows the 'Configuration' tab selected in the top navigation bar. Under 'Configuration', the 'Security & Compliance' sub-tab is active. The page has a 'Save' button in the top right corner. The main content area lists several settings: 'Platform access policy' with a 'Configure' link; 'Passwords'; 'Authentication and sessions'; 'Invitations and access rights'; 'Compliance'; and 'Other' (which is expanded). Under 'Other', there are three settings: 'Link key length' (set to 12), 'Automated deletion of local data (NetExplorer Drive)' (toggle on), and 'Event log retention period' (set to 1 year). At the bottom, 'Antivirus and anti-ransomware analysis' is also toggled on.

Notes

- As soon as a file is uploaded, antivirus check does its job and analyzes content of file.
- Tool also checks for file extensions which gives another level of security on your platform.
- Here is a non-exhaustive chart of extensions known to be potentially malicious.

Extensions considered as malicious

1999	_crypt	0x0	aaa
abc	aeab	bleep	ccc
crinf	crjoker	crypt	crypto
CTB2	CTBL	ecc	ekybtc
@inbox_com	EnCiPhErEd	encrypted	encryptedRSA
