Install NetSync for Windows

# Install NetSync on your computer :

- **Download NetSync app from** our website.
- Once downloaded, **execute program**
- Follow configuration Wizard as shown below.

Note : We do not advise to launch installer "As an administrator".
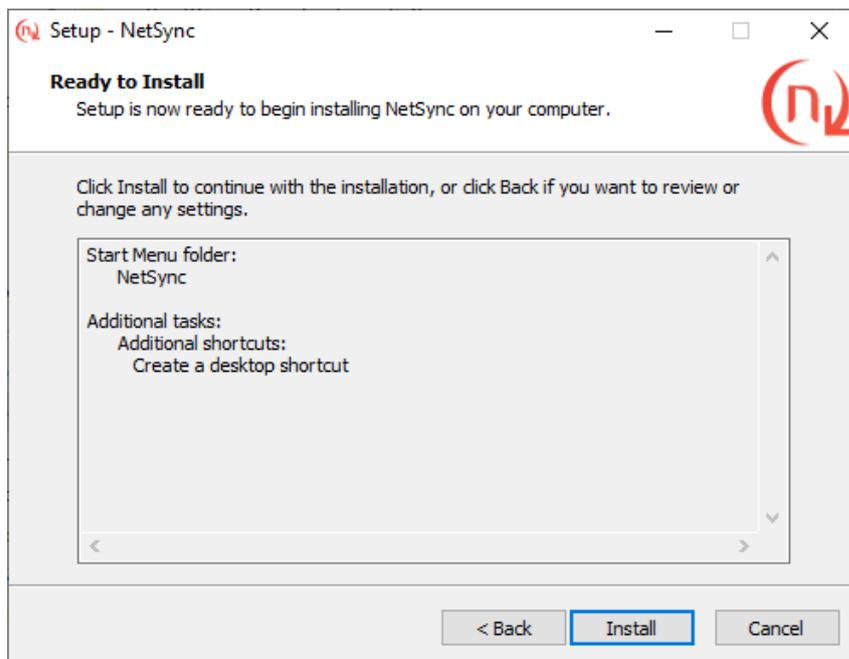

Installation wizard

- Select language then click **OK**

- Installation wizard starts, then click on **Next**
- Installer indicates location where folder will be created. Specify another location or click Next.
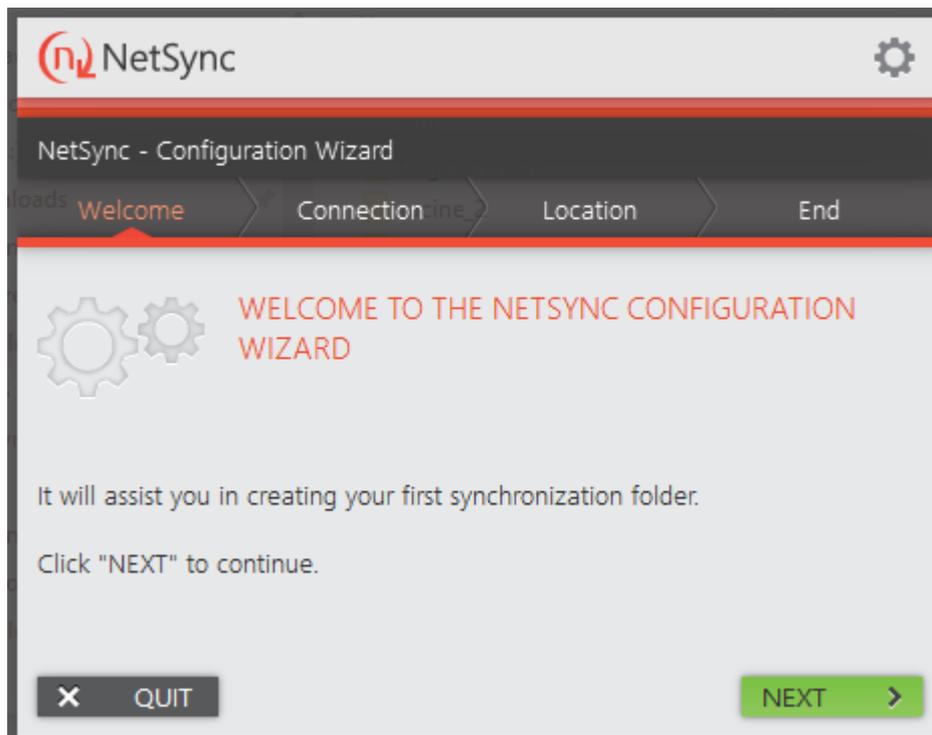

- Click **Next** one more time to add a shortcut on desktop.

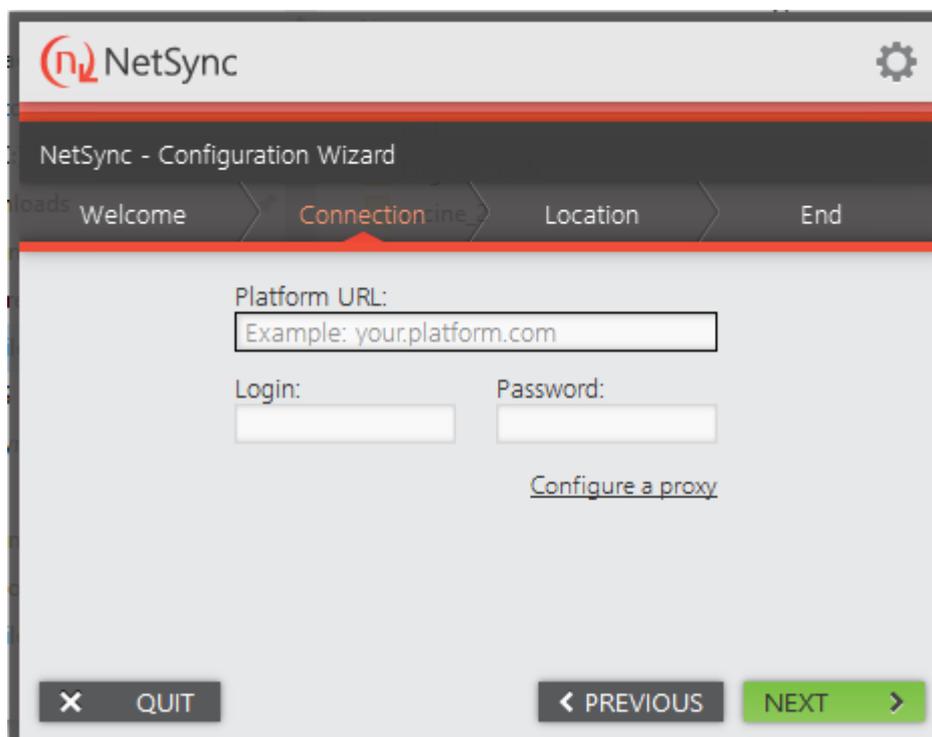

- Select **Install** and **Finish**.

Configuration wizard

At first start, configuration wizard displays (as shown below).

NetSync configuration wizard

- Click **Next**,
- During Connexion step, type **address of platform** and **your credentials**.

- **Careful** if you use an external identity provider as Office365, Azure or an account with double authentication set on it. if so, then you will have to use Application password.
- Click **Next**,

- In the next step **Location**, add your first synchronization task.
    - then select **platform folder** and **local folder** to be synchronized.
    - You will be able to add some more tasks after that.
- Click **Next** then **Finish**.

Notes

⬜ For Service Mode installation, please read dedicated webpage.
⬜ If NetSync icon is not permanently shown in taskbar, you can force display from Windows, please check dedicated webpage
