Manually mount a network drive in Mac Os

Guilhem VERGON - 2024-08-30 - Good practices

## Manually mount a network drive in Mac Os

(If you wish to store data in the cloud and access it from a network drive)

Create your NetExplorer platform

You wish to install a network drive on your Mac and easily acess your data stored on the NetExplorer.

For this :

- Open Finder. Select ALL then Connecter to server...
- In server address, type url of platform followed by "/dav"

(You should get an url like <u>https://nomdelaplateforme.netexplorer.pro/dav</u>)

- Click on Connect.
- **Type your credentials in the fields NAME and PASSWORD**, (as shown). Careful if you're using an external identity account (AD, Office365)or an account with double authentication set on it.then you will have to type an **Application password** (Comment configurer un mot de passe d'application)
- Click on Connect.

Conne	exion au s	erveur	
plorer.pro/dav			+ @~
	Ĩ	Parcourir	Se connecter
	Conne : plorer.pro/dav	Connexion au s : plorer.pro/dav	Connexion au serveur

 $\rightarrow$  Your computer automatically connects and you can find it in the **SHARED** area.

## Notes

A/. Credentials are the same than platform > browser access.

B/. If you loose internet access, drive will keep mounted, you just need to get internet access back to recover access to the content of drive.

C/. CAREFUL : your drive will disconnect with every reboot of computer. If you do not wish to redo mount

every time it starts, we advise you to establish an automatic connexion .

Once connected to network drive :

- Click on apple
- Go to System Settings
- Clck on tab "Users and groups"
- Select "OPEN from your user profile
- Add volume (drive letter) by selecting it from the + button
