

Application password

Guilhem VERGON - 2024-04-09 - Good practices

Application password

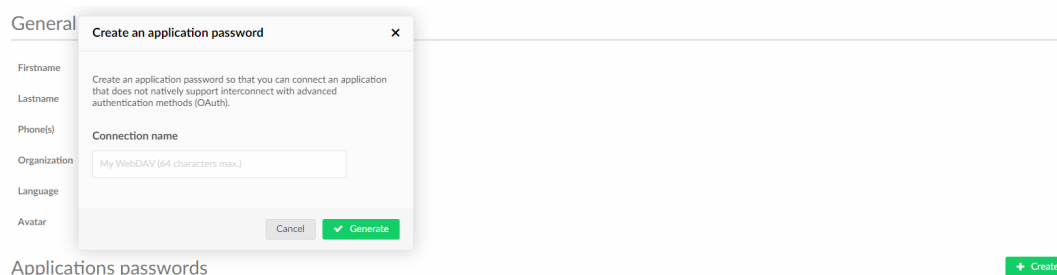

What's the use of Application password ?

Application password allows to connect NetExplorer application like NetSync or Outlook connector , or NetExplorerDrive) with :

- an external company account (AD, Azure, Office365)
- an account with double authentication ([How to set up double authentication ?](#))

How can I get one ?

In your profile, you can easily create one

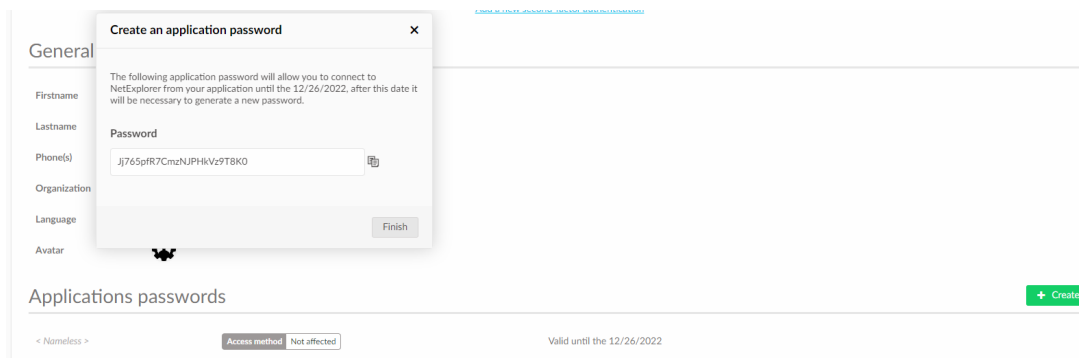

Applications passwords

+ Create

No application password is currently configured.
[Add an application password](#)

Once name filled-in, a password will be generated and expiration date will be set. (see in Configuratio/Security/app_credentials_ttl).

Applications passwords

+ Create

< Nameless >

Access method Not affected

Valid until the 12/26/2022

When password will be needed in tools, you will have to use this one, you will then see the method in your profile.

Notes

You need an application password per used application

It is important to remember that Application password is generated can only be seen once and cannot be retrieved or reset. Don't forget to remember it or copy it onto a safe and private location.
