

Share from mobile app (Android/iOs)

Guilhem VERGON - 2023-12-27 - Good practices

Share from mobile app (Android/iOs)

Use your platform as if you were on a computer

Email and link shares

As on web application, you can share by direct link (that you will copy and paste wherever you want) or by email link, that platform will send automatically..

All you need to do is push button  on a file, on a folder or on an empty zone if you wish to share the folder you're currently in.

This will then open **context menu**.

Press button  and select if you rather send by link or email.

For further information about share links, please [visit this page](#).

Upload links

As for the webapp, you can invite recipients to send elements in a place you will define.

Press button  or a folder or on an empty zone and select .

For further information, please [visit this page](#).

Invite to collaborate

You can, as for web app,, invite people to work in a folder.

- internals

- externals (account creation will be mandatory for recipients)

Press  on a folder or from an empty space in the current folder and select .

This will open "team" tab , and all you have to do is tap on  then add people and set the

proper rights.

For further information about invitations to collaborate, please visit [this page](#).
