## Profile

You can access it by clicking on the down arrow right after user name.

Here is a view from your profile

A screenshot of the user profile page. It has several sections: 'Email & password' with fields for 'Login' (Nicolas), 'Email(s)' (redacted), and 'Current password' (masked with dots); 'Double authentication' with a '+ Add' button and a message 'No second-factor authentication method configured yet. [Add a new second-factor authentication](#)'; 'General information' with fields for 'Firstname' (Nicolas), 'Lastname' (Arbouin), 'Phone(s)' (redacted), 'Organization' (Netexplorer), 'Language' (en), and 'Avatar' (gear icon); and 'Applications passwords' with a '+ Create' button.

You will find there:

- generic information about your account

and you 'll be able to :

- modify password (if Administrator authorized it)

- modify information about you (If Administrator authorized it)
- Add a [double authentication method](#)
- Create an Application password : When you need to connect to a NetExplorer application such as NetSync, WebDav... with an external account like SSO (Office365, Active Directory...), you will need an [Application password](#), one for each application used.
