### Applications passwords

+ Create

You will find there:

- generic information about your account

and you 'll be able to :

- modify password (if Administrator authorized it)
- modify information about you (If Administrator authorized it)
- Add a [double authentication method](#)
- Create an Application password : When you need to connect to a NetExplorer application such as NetSync, WebDav... with an external account like SSO (Office365, Active Directory...), you will need an [Application password](#), one for each application used.
