NetExplorer

Receive folders or files from an upload link

Nicolas ARBOUIN - 2025-01-14 - Share your files
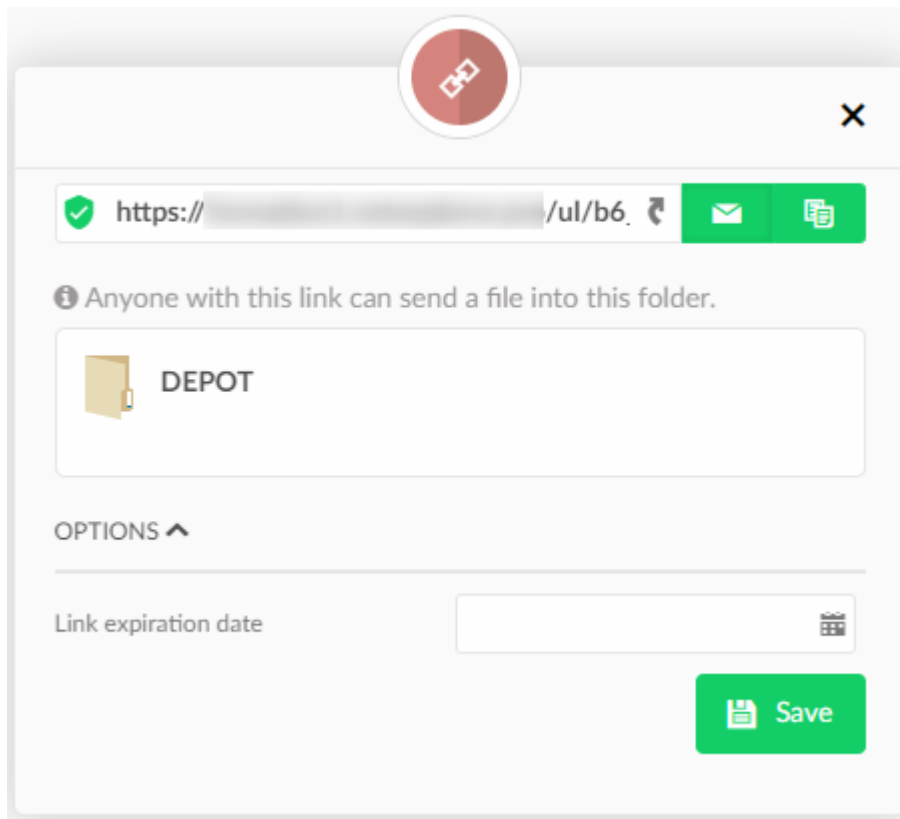

Receive folders or files from an upload link

You need to receive files from someone ? Upload links are just made for you !

Create your link

Upload links will allow you to receive files inside a choosen folder, no matter what size or number of files.

- **Go to your NetExplorer platform**

- Spot your folder.

- Right click on folder and select "Receive files here".

- The following windows then displays : you can see a link that you can share right now.
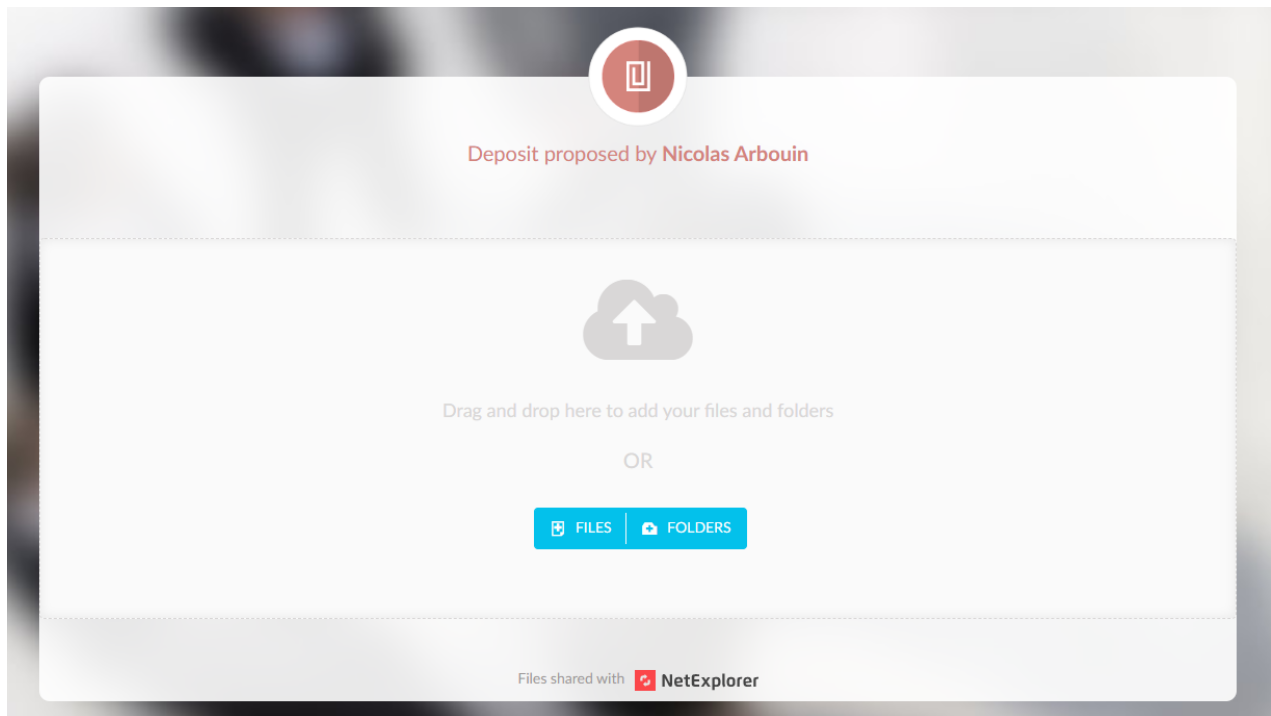

Share link

You can then :

- Send by email : An email will automatically open and your link will be enclosed, you just have to write a message to your recipient.

- Copy to clipboard : Your link is copied, you can paste it wherever you want.

On the recipient side

When your recipient will receive the email, he will click on the link and see a page like this :

2 possibilities:

- Use **drag and drop** : select elements and drop them on the cloud
- Click "**send files**", to explore local content.

Notes

➜ Your link will spell like this *https://nameofplatform.netexplorer.pro/ul/Cum4rfW3YZ*(platform adresse, type of adress and key)

➜ Each element will be downloaded and switches to "downloaded state". When the element is downloadade, recipient cannot download it back.

➜You cannot send empty folders

➜ Those links do not grant access to platform.
