

January 2026 update

2025-11-26 - Guilhem VERGON - [Changelog](#)

Update published in the evening of 2026 January 5th

Update : Role management and group collaboration

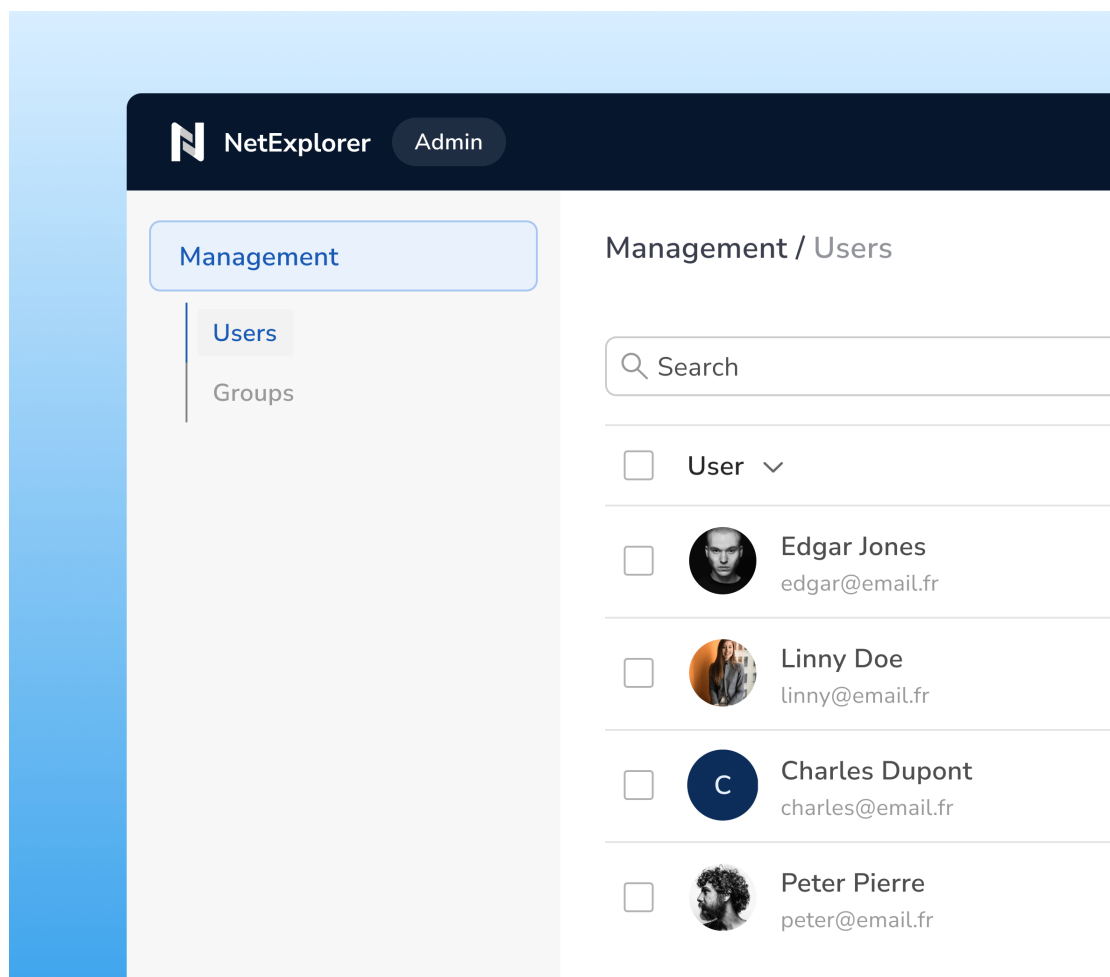

Administrator role

- Admins can now provide **Manager role** for users during creation or edition of an account, and put them into groups.
- **One or more groups can be associated** to a Manager.

- Manager is automatically added to group if added for management.
- A **Manager** without a group will have the same rights as an **internal user**.
- New configuration option “**Invite existing groups**”
 - Allows **Managers** and **Internal Users** to invite groups on a folder.0
 - **Admin groups** can not be invited or have their rights modified.

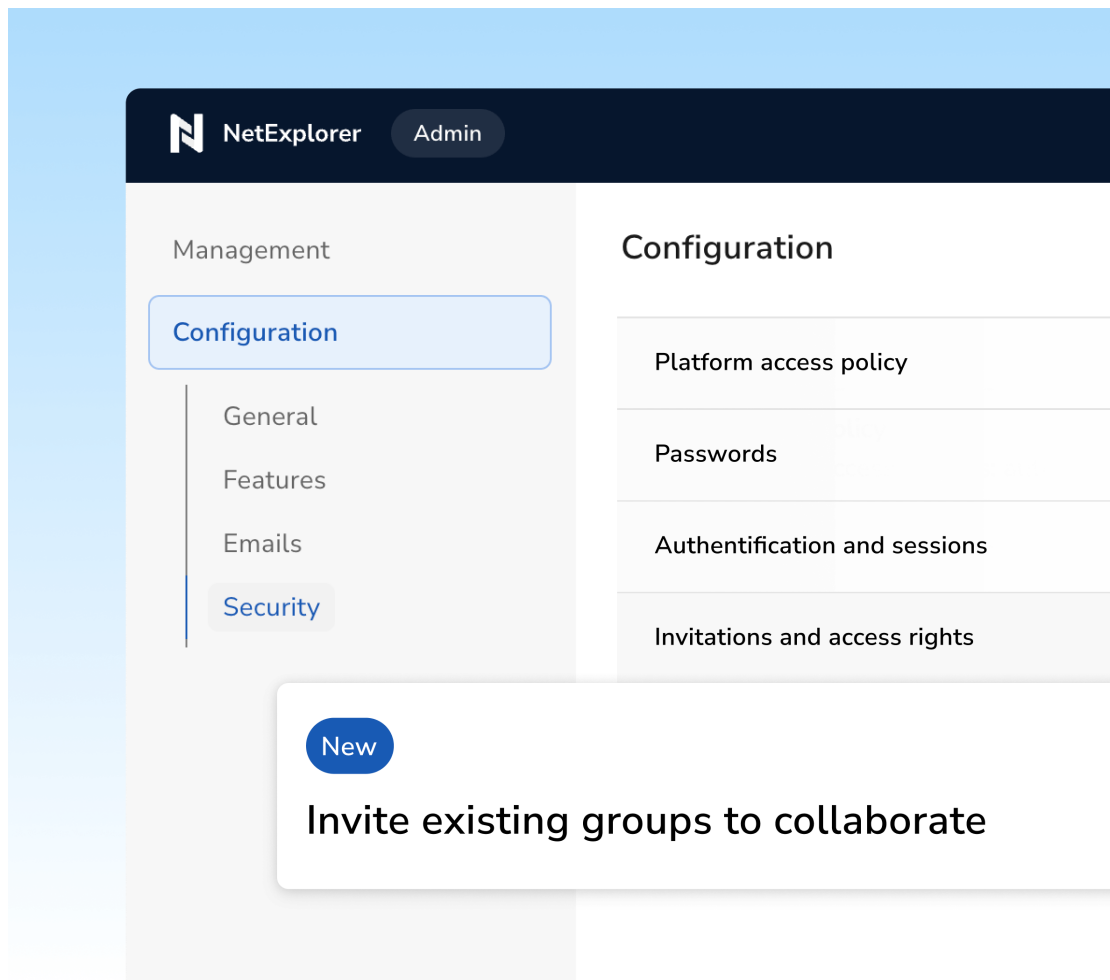

Manager Role

- New version for middle role between Admin and Internal User.
- Limited access to Admin Panel (**Users and Groups tabs**).

- Can:
 - **Manage users** in the managed groups (modify roles and informations and access policy).
 - **Create new users** inside of managed groups.
 - **Manage supervised groups**: members add or delete and modification of access policy.
- Can not **create new groups**.
- On folders :
 - If Manager has been given rights to invite : Manager can invite supervised **users** or **groups**.
 - Without rights to invite : Manager can only manage **alerts** over managed groups.
 - If “**Invite to collaborate existing users**” is turned on, Manager can invite **every existing groups** (except Admins) and give them access rights.

Internal User

- Can now invite groups on folders if :
 - **Admin** or **Manager** has given rights to invite AND “invite to collaborate existing groups” is turned on.
