

## January 2026 update

2026-01-05 - Guilhem VERGON - [Changelog](#)

*Update published in the evening of 2026 January 5th*

### 1. Role management and group collaboration

#### Administrator role

Edit a user X

Information Role Groups Access policy

**Administrator**  
All permissions to configure and administer the platform. i

**Manager**  
Member management and access control to their files. The manager is automatically a member of the groups they manage. i

Assign groups

- Admins can now provide **Manager role** for users during creation or edition of an account, and put them into groups.
- **One or more groups can be associated** to a Manager.
  - Manager is automatically added to group if added for management.
  - A **Manager** without a group will have the same rights as an **internal user**.
- New configuration option “**Invite existing groups**”
  - Allows **Managers** and **Internal Users** to invite groups on a folder.

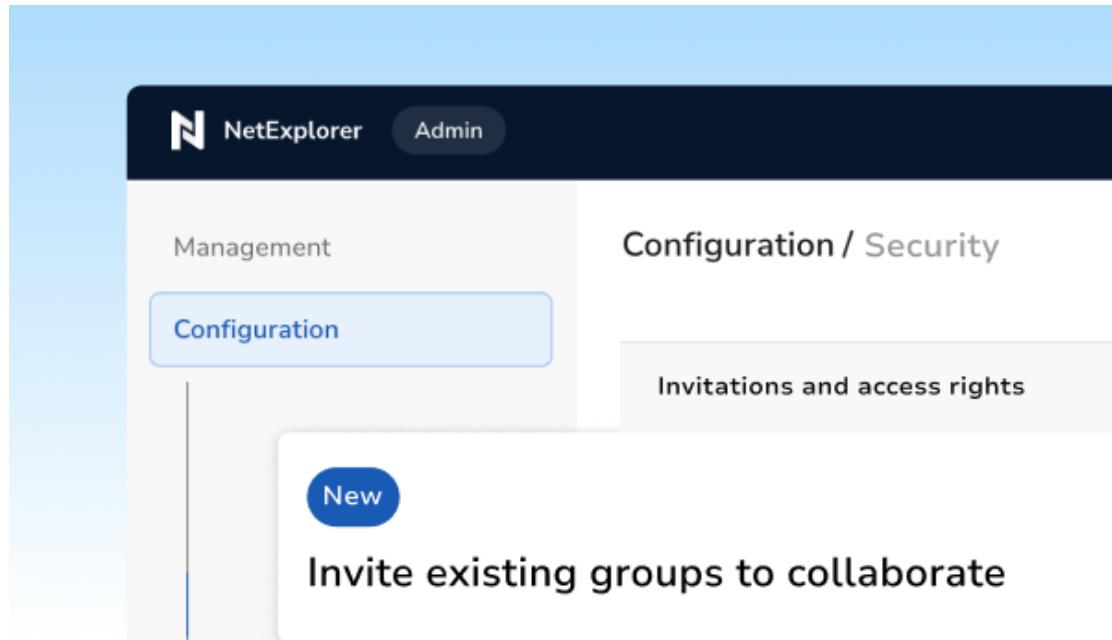

- **Admin groups** can not be invited or have their rights modified.

## Manager Role

- New version for middle role between Admin and Internal User.
- Limited access to Admin Panel (**Users and Groups tabs**).
- Can:
  - **Manage users** in the managed groups (modify roles and informations and access policy).
  - **Create new users** inside of managed groups.
  - **Manage supervised groups**: members add or delete and modification of access policy.
- Can not **create new groups**.
- On folders :
  - If Manager has been given rights to invite : Manager can invite supervised **users or groups**.
  - Without rights to invite : Manager can only manage **alerts** over managed groups.

- o If “**Invite to collaborate existing users**” is turned on, Manager can invite **every existing groups** (except Admins) and give them access rights.

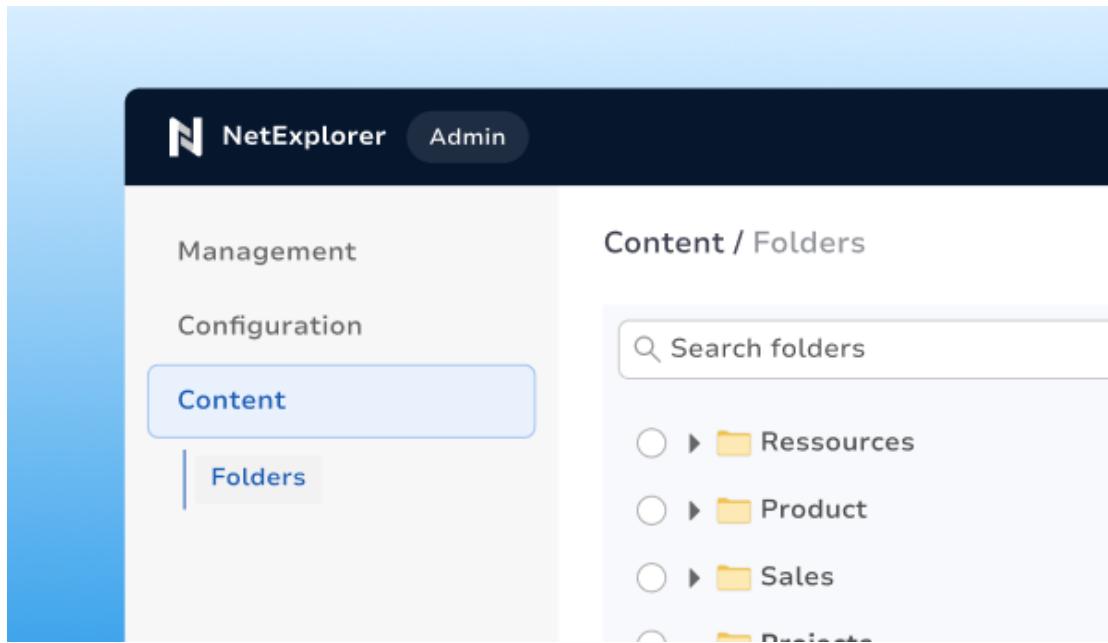

## Internal User

- Can now **invite groups** on folders if :
  - o **Admin** or **Manager** has given rights to invite AND “**invite to collaborate existing groups**” is turned on.

## 2. Content management is now centralized in Administrator Panel

- Folders and contents are now managed from **dedicated administrator interface**.
- Access rights for folders are now integrated in admin panel for **simple and secure management**.
