

October 2025 update

2025-10-01 - Guilhem VERGON - [Changelog](#)

Update deployed in the evening of 2025 October 13th

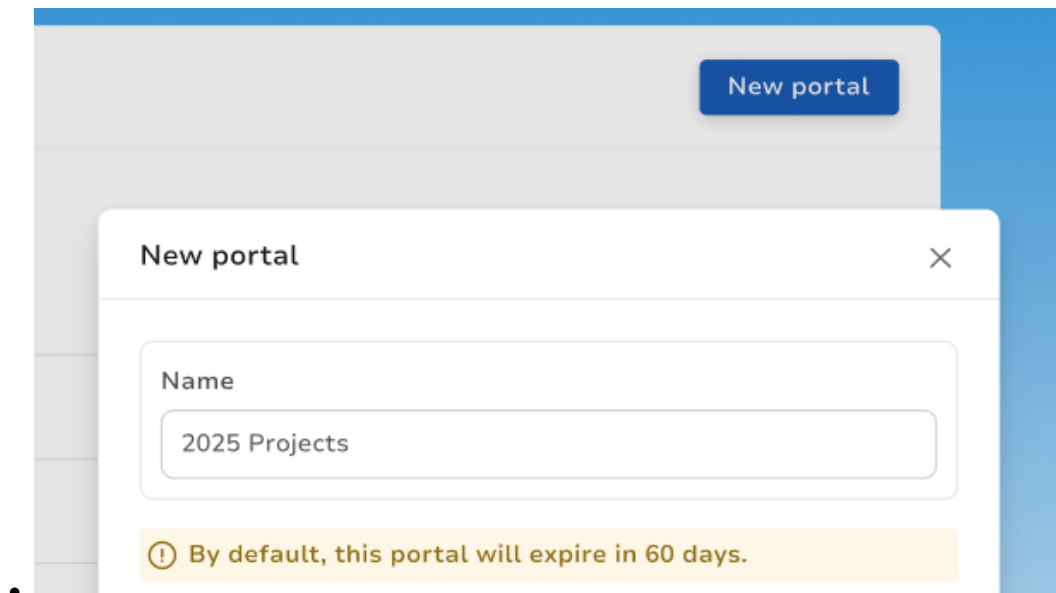

Share evolves, new feature is available : Portals.

This new feature allows users to create secured document sharing spaces with externals (subcontractors, clients, partners) or with other internal members of the organization.

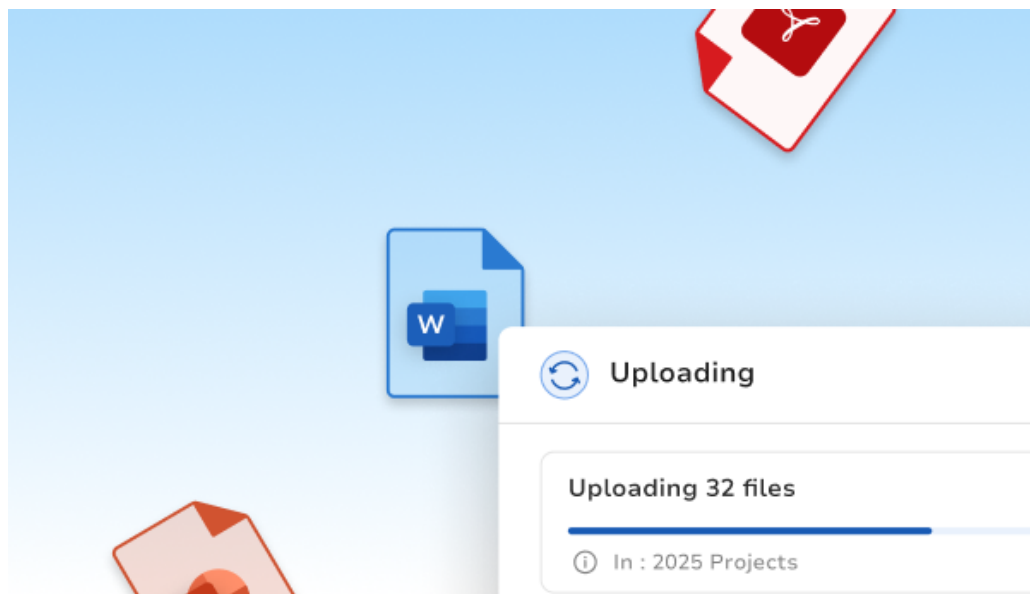

Thanks to portals, you can now :

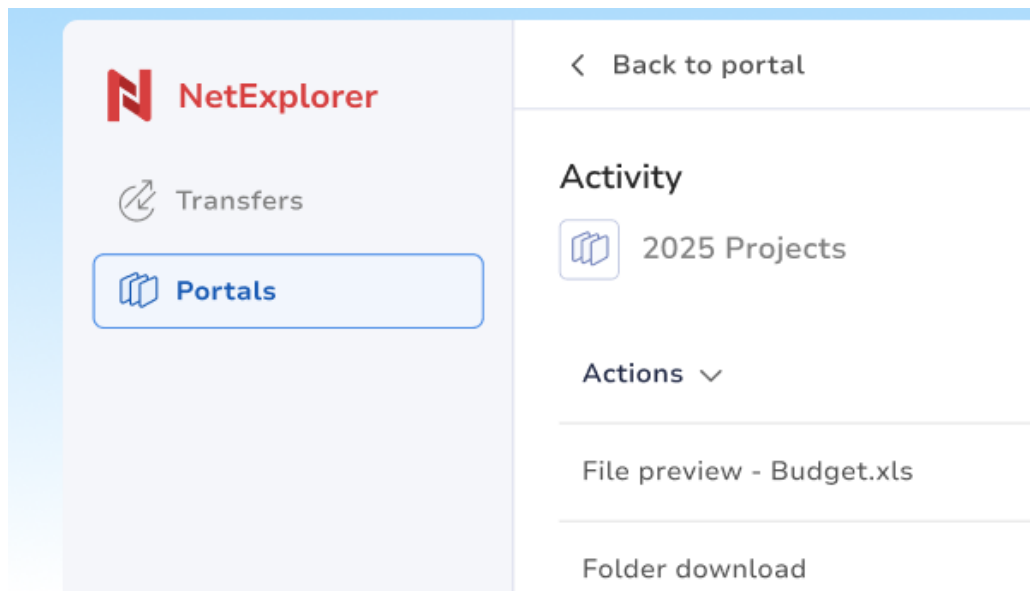

- Create your own portals and specify expiration date for each one of them

- Add files, create folders and manages structure on 3 levels

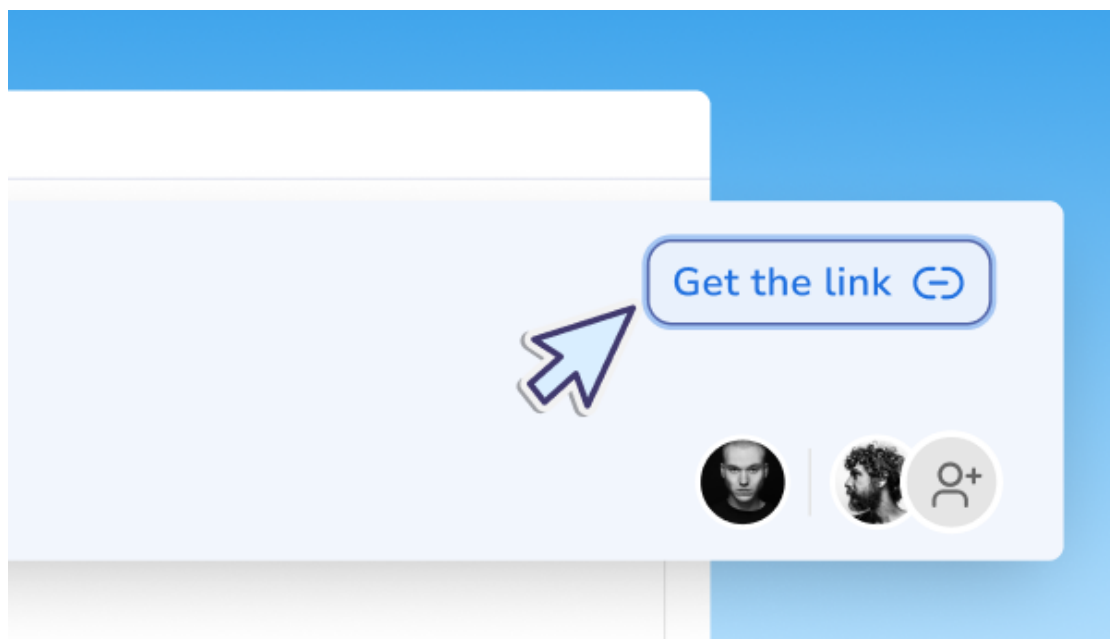

- Invite users with specific rights (preview, download, download and deposit)
- Manage your portals and the portals shared with you
- Follow activity on portals from its creation and for 3 months

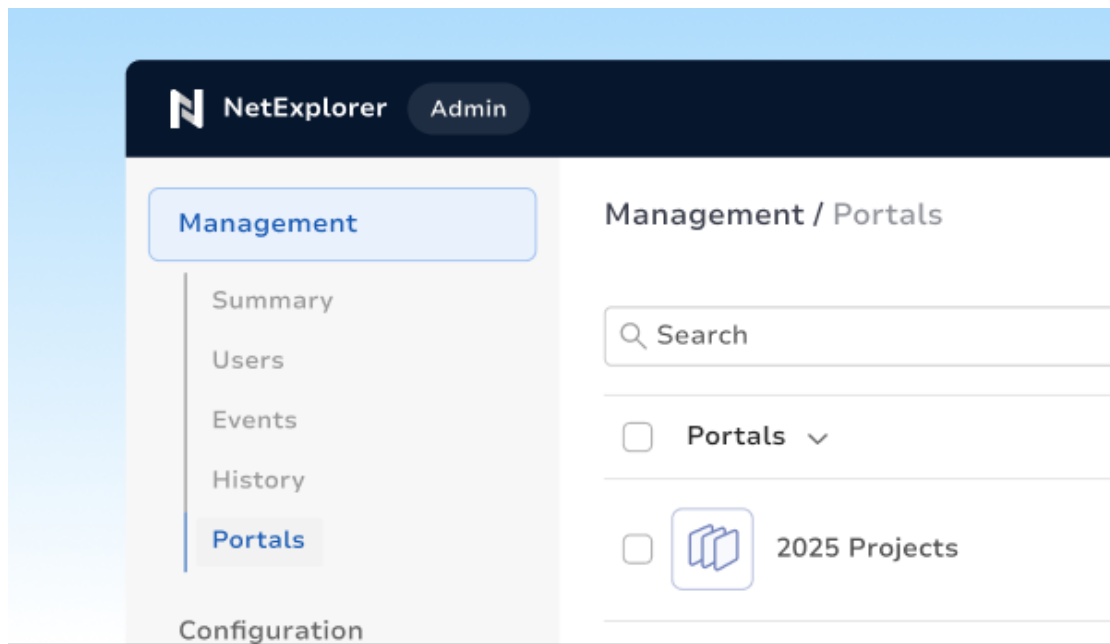

- View and download files

Each portal has a unique access link allowing users to access it directly. Each access is authenticated and logged to ensure perfect traceability.

As an Administrator, you have access to a dashboard for management of existing portals, where you can see members and the amount of space used.
